# hexnode

Manage your endpoints with the all-in-one Hexnode MDM solution

Mobile devices are ubiquitous in day-to-day life for millions of users. These have penetrated the modern day workplaces rapidly. Nevertheless, the constant mushrooming of security concerns gave rise to MDM. Moreover, an MDM is no longer considered a luxury for large enterprises, rather a true necessity for both SMBs and huge organizations.

Mobile Device Management

- Security Management
- Device Management
- Email Management
- Profile Management
- Content Management
- Containerization
- Remote Control
- Audits and Reports
- App Management
- Asset Management

1. Why MDM?

- ✔ Secured endpoints
- ✔ Empowering employees with business resources
- ✔ Strong grip on data usage
- ✔ Remote troubleshooting
- ✔ Controlled device updates
- ✔ Improved device regulatory compliance
- ✔ App control and management

2. Key Features

- ✔ Supports multiple device platforms
- ✔ Remote wipe
- ✔ Centralised management
- ✔ Location tracking
- ✔ Secure content management
- ✔ Kiosk lockdown
- ✔ Advanced device enrollment
- ✔ Expense management
- ✔ Containerization

3. Stats to ponder upon

- ✔ Around 43% of the cyber-attacks target small businesses
- ✔ In just 6 months after a cyber-attack, 60% of small businesses go out of business
- ✔ Small businesses score just 14% as highly effective in finding a way to alleviate vulnerabilities, cyber threats and attacks
- ✔ 48% of the infringements of data security are caused primarily by malicious intent or human error

Productivity rises by more than 70%

Many companies witnessed a rise in employee productivity after using an MDM solution

Easy implementation

Implementation of the solution is just minutes away with no complications

Cost effective management

Consolidating all your endpoints onto one solution makes it a worthwhile investment instead of purchasing seperate vendors for MDM, MAM, location tracking, etc

Single console management

Managing all the devices from a single console aids in easier management
