Securing your classrooms with a **UEM SOLUTION**

hexnode

Digitalisation of educational institutes started way back. Replacing blackboards with projectors and televisions, swapping books with iPads and ditching those bags which weigh a ton. This also means that a large number of devices are now connected to the institute's network which makes a **UEM SOLUTION A NECESSITY.**

Perks of using a UEM solution

- Configure devices the zero-touch way
- Manage Apple devices easily with ASM
- Perform remote maintenance and troubleshooting
- Track the device health and location with geofencing
- Blacklist or whitelist the required websites and apps
- Lockdown devices with only the required applications

Most modern UEM solutions like Hexnode, offers integration with ASM and ABM which makes room for more features.

hexnode

Apple School Manager

Easy creation of Managed Apple IDs by importing data from an existing student system.

Shared iPads can be set up with every unique profile offering a personalized experience.

Student devices can be easily configured, managed and restricted from the teacher's device via an app.

Apple Classroom

Apple Classroom is an ideal application for iPads and Macs that helps:

- Guide learning experiences with app and content deployment.
- Sharing work progress between teacher and student
- Manage student devices
